

WREA Inc announces support for commercial users of Green Button data

Las Vegas, NV, September 26, 2012

Western Renewable Energy Analysts Inc. (WREA Inc.), a company specializing in energy and carbon management for large industrial sectors, announced that it now offers integrated carbon footprinting for commercial and industrial enterprises of any size using the green button data that many utilities are offering. In addition, companies will be able to evaluate alternate scenarios that can lead to reduced peak time energy usage, lower their costs and have lower carbon footprints.

Green button data is a data format resulting from an initiative of the U.S. Department of energy that seeks to encourage utilities to provide usage data in a standardized manner to users of energy, natural gas and water.

Mr. Scott Foster, President and CEO of WREA, said “This is a very significant development as proper energy and carbon management for the commercial sector can have big impacts. Proper energy management practices can lead to significantly lower amount of greenhouse gases emitted. Additionally, adopting smart practices and optimized operation of equipment, can result in lower energy costs, thus contributing to the bottom line economics.”

WREA is focusing its efforts on enterprises and companies with large carbon footprints in an effort to lower them. WREA is a seller of EMSPRO(TM), the environmental management systems software that performs GHG inventories, and has built-in automation for capturing data using web services. This lessens the data gathering and computational burden that companies have to face. WREA brings to the table the latest in web 2.0 technology, including applications offering service oriented architecture. This coupled with the years of experience its principals have in the energy sector, power generation and transmission, will be used to effectively market these products and services.

WREA Inc. is focusing on the renewable energy sector by looking at all phases of the industry and executing those aspects into individual projects. A key component in any of today’s industry is the carbon footprint associated with any enterprise. WREA Inc. through its flagship offering of the enterprise pollutant tracking software EMSPRO(TM), offers highly sophisticated and economical solutions to track companies’ carbon footprints.
